Student Organization Event Registration and Attendance System

WBS Estimate

Revision No. :	1.00
Modified By – Date :	Talisic, Jhon Rosell - 2026/09/11
Preliminary Review and Approval – Date :	Last Name, First Name - yyyy/mm/dd
Final Review and Approval – Date :	Last Name, First Name - yyyy/mm/dd

REVISION HISTORY

REV NO	MODIFIED BY	MODIFIED DATE	REMARKS	PRELIMINARY REVIEW AND APPROVAL	DATE REVIEWED	FINAL REVIEW AND APPROVAL	DATE APPROVED
1.00	Talisic, Jhon Rosell	2026/11/03	Initial Creation	Last Name, First Name	yyyy/mm/dd	Last Name, First Name	yyyy/mm/dd

MODULE	FUNCTION / DESCRIPTION / ASSUMPTIONS	Type	FUNCTIONAL CATEGORY			
			SCREEN	REPORT	BATCH	OTHERS
Applicant App						
Authentication						
AUTH-01 — Student: Request an account	Submit student identity, academic details and password for approval. Validate duplicate identities, securely hash the password and create a pending request; allow a new account request after rejection.	Web	x			
AUTH-02 — Officer/Admin: Review account requests	Approve or reject pending account requests and record the decision. Approval atomically creates an active member-role account and linked profile; rejection requires a reason. Clear the finalized request password hash. Use 25-row pagination for list results.	Web	x			
AUTH-03 — All Accounts: Log in and log out	Authenticate active accounts using email/password and enforce current role permissions. Use signed, expiring authentication; logout clears the browser cookie and inactive accounts cannot access protected functions.	Web	x			
Master Data						
MD-01 — Member: View my profile	Display the member's account, academic and membership details. Officers handle profile corrections; profile-picture uploads are not included and password changes remain deferred.	Web	x			
MD-02 — Officer/Admin: Maintain members	Maintain approved member profiles, academic/contact details, membership type and active status. Validate student-number corrections, record reasons and apply future-registration rules when membership becomes inactive without rewriting historical participation. Use 25-row pagination for list results.	Web	x			
MD-03 — Officer/Admin: Manage event types	Create and edit unique event-type names and descriptions. Activate or deactivate types, allow only active types for new selections and preserve historical event references. Use 25-row pagination for list results.	Web	x			
MD-04 — Officer/Admin: Manage venues	Maintain venue details, capacity, active status and a required photo. Validate capacity changes against linked draft/published events and preserve historical references; required photos may be replaced, not removed without replacement. Use 25-row pagination for list results.	Web	x			
MD-05 — Account Owner (avatar); Officer/Admin (event/venue): Manage record images	Provide officer/admin JPEG/PNG uploads for required venue photos and event covers required before publication. Validate permissions/content, use persistent local paths and safely replace files; no user profile pictures.	Web	x			
Events and Registration						
EVT-01 — Officer/Admin: Create and publish events	Create event drafts with schedule, venue, type, capacity, deadline and cover. Validate master records, capacity and dates; publication requires a cover and future deadline, makes the event visible and immediately opens signup. Use 25-row pagination for list results.	Web	x			
EVT-02 — Member; System: Show registration availability	Display signup as open before the registration deadline and closed at or after it, using labelled local time. Reject late submissions server-side without changing the published event status.	Web	x			

MODULE	FUNCTION / DESCRIPTION / ASSUMPTIONS	Type	FUNCTIONAL CATEGORY			
			SCREEN	REPORT	BATCH	OTHERS
EVT-03 — Officer/Admin: Edit event details	Allow all validated draft edits. After publication, permit only title, description and cover replacement; lock operational details, retain required images and make completed/cancelled events read-only.	Web	x			
EVT-04 — Officer/Admin: Cancel or complete events	Cancel eligible events with a reason, cancel active registrations and invalidate QR access without promotion. Block cancellation after valid attendance or issuance; explicitly completing a concluded event closes check-in and enables certificate review.	Web	x			
REG-01 — Member: Browse and register	Browse published events and submit one pending request per member/event before the deadline. Validate eligibility, capture academic snapshots and allow requests for full events with a waitlist warning; no reapplication after cancellation. Use 25-row pagination for list results.	Web	x			
REG-02 — Officer/Admin: Review registrations	Approve or decline pending requests before event start, including after signup closes. Confirm only with capacity and waitlist priority respected; otherwise waitlist. Record review details and generate QR credentials only on confirmation. Use 25-row pagination for list results	Web	x			
REG-03 — Member: Cancel my registration	Allow members to cancel before event start without valid attendance, even after signup closes. Require confirmation, record the cancellation, invalidate the QR and release any seat; no reapplication or automatic promotion. Use 25-row pagination for list results.	Web	x			
REG-04 — Officer/Admin: Promote the next waitlisted participant	Let officers explicitly promote the next eligible reviewed waitlisted participant before event start. Apply review-time/ID priority, recheck capacity transactionally and record confirmation with QR access; never promote automatically.	Web	x			
REG-05 — System: Enforce processing cutoffs	Stop new signup at the deadline and reviews, promotions and member cancellations at event start. Retain unresolved pending/waitlisted requests as non-actionable history, exclude them from no-shows and enforce cutoffs server-side.	Web	x			
Attendance and QR Codes						
QR-01 — Confirmed Participant: Access my event QR	Display or download the confirmed participant's event-specific QR as an on-demand PNG. Saved copies work offline for members, but officers validate eligibility online; cancelled or unconfirmed registrations have no usable QR.	Web	x			
ATT-01 — Officer/Admin: Control and record check-in	Manually control check-in for published events and record arrivals through QR scanning or explicit manual lookup/check-in. Validate event, confirmation and eligibility; timestamp attendance, prevent duplicates and display participant identity. Use 25-row pagination for list results.	Web	x			
ATT-02 — Officer/Admin: Correct attendance	Invalidate mistaken attendance with a reason while preserving its history. Exclude it from reports and unissued eligibility; block corrections after certificate issuance and do not permit re-check-in after invalidation. Use 25-row pagination for list results.	Web	x			
ATT-03 — Member: View my attendance	Show personal attendance and check-in details within My Events, clearly identifying corrected records. Restrict access to authorized personal information; members cannot record or invalidate their own attendance. Use 25-row pagination for list results.	Web	x			
Certificates and Reports						
CERT-01 — Officer/Admin: Review certificate eligibility	Review valid attendees of completed events and approve or decline certificate eligibility with reviewer/time and a decline reason. Recheck attendance and permissions; declined decisions cannot reopen, and issued decisions cannot change. Use 25-row pagination for list results.	Web	x			
CERT-02 — Officer/Admin (issue); Owner/Management (download): Issue and download PDF certificates	Generate and retain one fixed-template PDF per approved eligible participant, preserving unique number, snapshots and issuer details. Prevent duplicate issuance, handle file/database failures and provide private authorized downloads without rewriting issued PDFs. Use 25-row pagination for list results.	Web	x	x		
REP-01 — Officer/Admin: View participation reports	Show participants/statuses, confirmed and attendee counts, attendance rate, completed-event no-shows and attendee course/year distribution. Use signup snapshots and full-dataset totals; exclude unconfirmed/cancelled requests from expected attendance and defer report exports. Paginate detail rows at 25; retain full-dataset totals.	Web	x			

MODULE	FUNCTION / DESCRIPTION / ASSUMPTIONS	Type	FUNCTIONAL CATEGORY			
			SCREEN	REPORT	BATCH	OTHERS
Administration						
ADM-01 — Admin: Manage roles and account access	Assign fixed roles and deactivate/reactivate accounts with reasons. Block inactive access, apply future-registration cancellation rules, preserve history and protect the last active administrator; do not automatically restore seats or promote participants. Use 25-row pagination for list results.	Web	x			
ADM-02 — Admin: Review activity history	Provide a basic read-only activity list showing actor, action, affected record, time and reason. Preserve append-only audit history and relevant stored changes without credentials/tokens; defer advanced filters and field-comparison screens. Use 25-row pagination for list results.	Web	x
